## **The Hérault Méditerranée Urban Community renews its contract with SUEZ to deliver sustainable water and wastewater services benefiting the region and its residents**

**Starting on July 3, 2026, SUEZ, with financial support from the Banque des Territoires, will operate the Hérault Méditerranée Urban Community's drinking water, sewerage and on-site sanitation services for 15 years, through a dedicated company. This new agreement highlights the Urban Community's investments in the energy transition and in preserving water resources throughout a coastal area characterised by chronic water stress, significant seasonal population fluctuations, and vulnerable natural environments.**

### **Turning sanitation services into a driver of energy sovereignty in Occitanie**

In Agde, sanitation is becoming a driver of economic development and the energy transition. The Posidonia wastewater treatment plant, which serves the cities of Agde and Vias, will benefit from a €14 million investment to install an anaerobic digester for sludge treatment and energy recovery, designed to handle seasonal variations in flow while optimising energy output. From 2029, the facility will produce 3.6 GWh of biomethane per year, which will be injected into the GRDF gaz network—equivalent to the consumption of 570 households—thereby contributing to regional energy sovereignty.

### **Reusing wastewater to ease pressure on resources**

This contract prioritises treated wastewater reuse, with Agde being one of the pioneers in France: since 2020, the Hérault Méditerranée Urban Community has been irrigating the golf course with recycled water, avoiding the annual pumping of 200,000 m<sup>3</sup> of drinking water.

With this new contract, the territory is going a step further: up to 600,000 m<sup>3</sup> of recycled water meeting the most stringent standards (Class A+) will be reused each year, including 200,000 m<sup>3</sup> for golf course irrigation, and additional volumes for networks hydro-flushing, street cleaning, and fire and rescue operations. As of 2033, recycled water will also be used for hull maintenance at the Port of Cap d'Agde, watering of the rugby stadium, and vehicle cleaning at the municipal technical center. To achieve this level of quality, the Posidonia wastewater treatment plant's existing membrane ultrafiltration line will be supplemented by combined chlorine and ultraviolet (UV) disinfection.

### **Long-term strategic choices tailored to the region**

SUEZ will continue to produce and distribute drinking water to 18,000 users and support the Hérault Méditerranée Urban Community's water policy ambitions.

Under sustained pressure on water resources, the Urban Community has proactively adapted its model. As a major tourist destination with pronounced seasonal population swings, it introduced one of France's first seasonal water tariffs in 2014 to balance tourist appeal, infrastructure funding, and summertime resource conservation. Thanks to more than fifteen years of sustained investment, the local authority now benefits from high-performing infrastructure that meets the challenges of climate change.

The rollout of the latest smart meters in the municipalities of Nézignan-l'Évêque and Saint-Pons-de-Mauchiens in 2026 will enable all users to benefit from remote meter reading. With a dedicated app, they will be able to track monthly consumption, detect potential leaks early, and better manage their bills. In Occitanie, SUEZ's remote meter reading systems identified more than 33,500 suspected leaks in 2025, preventing water losses and additional costs for customers.

SUEZ, Société Anonyme, a company registered under the laws of France, with a share capital of €63,799,880.78, having its seat at: Altiplano, 4, place de la Pyramide - 92800 Puteaux, France, registered number 901 644 989 RCS Nanterre –Tel : +33 (0)1 58 81 20 00 – [suez.com](http://suez.com) – VAT Number: FR60901644989

## A sustainable model benefiting residents

With nearly €55 million of investments, a dedicated local governance structure bringing together SUEZ and Banque des Territoires, and a team of 44 employees, this new contract underscores a commitment to locally delivered services and long-term sustainable performance.

**Across the drinking water distribution networks, SUEZ will implement tailored action plans for each municipality to sustainably reduce losses from leakage and unauthorised consumption.** The programme combines advanced network oversight via SUEZ's Aquadvanced platform for real-time performance monitoring; pressure optimisation in selected zones to limit losses when leaks occur; an ambitious renewal programme covering 21 km of pipes and 1,950 service connections; the deployment of 550 fixed acoustic sensors; annual leak-detection surveys across 240 km of network; and targeted camera inspections. Together, these measures will lift network efficiency above 91% by the end of the contract and save 3 million m<sup>3</sup> of water.

**Arnaud Bazire, Executive Vice President, Water France at SUEZ**, said: “SUEZ is very pleased to continue supporting the Hérault Méditerranée Urban Community in delivering sustainable water and sanitation services to residents in the face of growing water scarcity. This long-term contract reflects our trusted partnership with the Urban Community and will help us scale innovative solutions—such as sludge anaerobic digestion, wastewater reuse, and smart instrumentation to optimise network performance—to meet the ambitious policy goals set by the elected officials.”

**Patrick Martinez, Regional Director for Occitanie at the Banque des Territoires**, added: “This new partnership with SUEZ, serving the Hérault Méditerranée Urban Community and its residents, builds on our strong, long-standing collaboration, combining SUEZ’s recognised sector expertise with the Banque des Territoires’ financial strength. To accelerate the deployment of sustainable, resilient water management amid resource scarcity, and to contribute to the decarbonisation of public water and sanitation services, the Banque des Territoires is renewing its commitment to local authorities by mobilising dedicated finance.”

### About SUEZ:

Faced with growing environmental challenges, SUEZ has been delivering essential services that protect and improve our quality of life for more than 160 years. SUEZ provides its customers with innovative and resilient solutions for water and waste services. With 40 000 employees across 40 countries, the Group works with customers to create value over the full lifecycle of their assets and services, and to drive their low carbon transition. In 2024, SUEZ provided drinking water for 68 million people worldwide and sanitation services for 44 million people. The Group generated 8 TWh of energy from waste and wastewater. In 2024, SUEZ has generated revenues of 9.2 billion euros.
