SUEZ SUPPORTS GREATER MOSCOW IN ITS SMART MANAGEMENT STRATEGY FOR RUBBLE AND CONSTRUCTION WASTE

On the occasion of the 2018 Moscow Urban Forum, SUEZ and Mosinzhproekt (MIP) are jointly engaged in helping address the challenges of urban transformation and a circular economy for the Russian megalopolis. Working within the context of a memorandum of understanding, the Group will contribute to the strategy for rubble and waste management produced by urban transport projects in Greater Moscow while employing digital solutions.

In order to improve mobility, the City of Moscow is implementing a comprehensive urban transport development plan. This includes developing a multi-modal transport network by 2021, including the development of the subway, with more than 60 stations and 140km of new lines within Greater Moscow.

To support these major projects, which will generate over 50 million cubic meters of rubble, the City wants to optimise construction waste management, from treatment to recovery and including reuse, but also to ensure its traceability. The objectives of the strategy are to reduce inconvenience to users, to improve Greater Moscow's environmental footprint and to ensure soil remediation, while at the same time controlling costs.

SUEZ will provide its expertise in sustainable cities and the circular economy, being particularly involved in drawing up a master plan including the implementation of digital solutions.

The strategic cooperation between SUEZ and MIP will help to define the master plan for the waste derived from development of the urban transport project of Greater Moscow, including the optimization of the methods of recovery.

"We are proud to share with MIP our expertise and solutions combining urban development and the circular economy. They will contribute to the success of the urban transformation project within Greater Moscow, by optimizing the management of worksite rubble and debris, and of course giving these materials a new life", commented Jean-Louis Chaussade, CEO of SUEZ.

About SUEZ

With 90,000 employees across five continents, SUEZ is a global leader in smart, sustainable resource management. The Group provides solutions for managing water and waste that help cities and industries optimise the management of their resources and improve their environmental and economic performance while complying with current regulations. SUEZ is wholly committed to the resource revolution to counter the challenges of quality and availability. Building on the potential of digital technology and innovative solutions, the Group is able to recover 17 million tonnes of waste a year and to produce 3.9 million tonnes of secondary raw materials, as well as 7 TWh of local renewable energy. It also preserves water resources by providing 58 million people with sanitation services and reusing 882 million m³ of waste water. In 2017, SUEZ generated a turnover of €15.9 billion.
